NANO ELECTRONICS

Exp. 2. Simulation of Density of States of Quantum Well Structure with various nanometer thickness Various Nanometer Thickness.

Aim: To simulate density of states of quantum well structure with various nano meter thickness.

Software: NanoHub Online Tool

OUTPUT

The graph displays the **Density of States (DOS)** for the selected material configuration.

Case Study 1: Simulate the density of states of quantum well of thickness 0.6 nm

This figure shows the **nanoHUB thermoelectric simulation** with **0.6 nm material thickness**.

The graph displays the **Density of States (DOS)** for the selected nanocomposite structure.

Case Study 2: Simulate the density of states of quantum well of thickness 0.5 nm

This figure shows the **nanoHUB thermoelectric simulation** with **0.5nm material thickness**.

The graph displays the **Density of States (DOS)** for the selected nanocomposite structure.

CONCLUSION

Simulation of density of states of quantum well structure with various nanometer thickness is accomplished.
